C O R E I N T E R F A C E & U X

Chat Interface

Users can build or interact with agents using plain English.

Workflow Builder

A visual canvas with 115+ pre-built blocks — filters, if-else, AI nodes, integration triggers.

History

Includes the complete account activity

Skills

reusable knowledge packs that can teach

Pre-Build Agent Templates

Contextual prompt suggestions in chat agents to guide users naturally.

Artifacts Creation

Agents can generate rich artifacts — documents, structured outputs, and more — directly in the UI.

AGENT CAPABILITIES

Web Search

Built-in ability to search the web inside any workflow or agent session

Image Generation

Generate AI images natively within flows — no external service switching

Web Scraping

Scrape any website + Chrome extension for browser recording and replay

Sub-Agent Support

Explicitly add sub-agents within a workflow for parallel task execution

Max Steps Control

Control agent's max_steps to prevent runaway execution and manage costs

Thinking & Tokens

Fine-tune reasoning depth and token budget per run — great for cost control

Multi-LLM Support

Switch between Claude, GPT-4, Gemini, Perplexity, O3-Mini per node

MCP Integration

Model Context Protocol — describe integrations in plain language, AI writes the code

W O R K F L O W B U I L D E R

Copilot in Workflow

Gummie AI assistant helps to build flows by exploring nodes intelligently as you describe your goal.

Node Library Depth

Workflow canvas offers an extensive library of categorized nodes

Subflows

Nest workflows inside other workflows. Modular, reusable automation building blocks.

Previous run history

Allows to trace back to previous workflow runs and inspect their full results

Interfaces

Takes complex workflows and makes them simple to use- easy for sharing via team

Webhook support

Switch between Claude, GPT-4, Gemini, Perplexity, O3-Mini per node

ENTERPRISE & SECURITY

SOC 2 Type II

GDPR Compliant

HIPAA Ready

Zero Data Retention

Private VPC Deployment

Run Gumstack inside your own virtual private cloud for full infrastructure control.

Role-Based Access Control

Granular permissions — control who can see, build, or trigger which workflows.

SSO / SCIM / SAML

Plug into your existing identity platform. Enterprise-grade identity management.

Audit Logs & Analytics

Trace every tool call and credit spend through a single logging layer.

AI Model Access Control

Restrict which LLMs team members can use. Compliance and cost governance built-in.

Zero Data Training

Customer data never used to train any AI model. DPAs in place for all 3rd-party models.
