# What is Dust AI?

Dust is an enterprise AI platform positioned as an “Operating System for AI Agents”. Its core value proposition is to help organizations build, deploy, orchestrate, and govern specialized AI agents that work alongside teams and connect securely to company knowledge, tools, and workflows.

## Name:

For an AI company, that can symbolize:  
AI working quietly in the background, across  
all your tools and data.  
We clean up the dust of your data and make it  
useful.

## Info:

Estimated revenue: ~\$6 M–\$7.3 M per year  
(2025)  
Founded -2023  
Headquarters: Paris, France

**Skills — Extend agent capabilities with reusable actions**

**Agnostic models**

## Spaces

**Tools — Equip agents with the right capabilities**

**Triggers — Automate workflows based on events**

**Connections — Authorize and control what data the platform can access**

## Admin

**Security — Access controls and compliance**

**Workspace Settings — Configure your environment**

**Analytics — Usage insights and performance tracking**

**Costing — Monitor and manage spend**

# Differentiator

---

- **@deep-dive + Go Deep feature, designed for complex multi-step research. It can orchestrate up to 6 parallel sub-agents to simultaneously search internal documents, data warehouses, and the web, enabling deep investigations that may run for 10–30 minutes. Additionally, the “Go Deep” skill can be attached to any custom agent, extending advanced research capabilities across workflows.**
